

Virtual Machine Installation.

STEPS:

Go to this PC and click the right button - it lists the options now select the properties it leads u to the settings device specification and windows specifications note down the installed RAM whether it is 4GB or 8GB according to the RAM we can specify the storage space in VM.

Step 1:

Open Virtual Box

click the Machine menu and select the New option.

Step 2:

In the Name field option, Confirm a descriptive name for the Virtual machine for example VM-Win10.

Step 3:

In the folder option the path where the tool placed should be mentioned. It can be kept in local disk C or D.

Step 4:

In the Version option select the Windows 10 (64 bit) option.

Step 5:

POCO

SHOT ON POCO M2 PRO

click the Next button. Specify the amount of system memory to allocate for the machine.

Note: Ideally you want to give it at least 4GB of RAM but this setting will depend on the amount of physical memory available on the device and the applications you will be using.

Step 7:

click the Next button specify the size of the Virtual hard drive.

The default 50GB is suitable for installation and light applications, but the size will depend on the applications and files you want to store in drive.

Step 8 Now the Configuration you have chosen for the VM is displayed and modifications can be done by clicking back button or else click finish.

Step 10

Now the Virtual machine is Created.

Step 11

Get into Files ---> Tools ---> Virtual media manager.

Step 12

We Can expand the size Using Virtual Box.
